

## Africa should be the breadbasket of the world says AfDB president

African Development Bank Group president, Akinwumi Adesina has requested that farmers across the African continent be given agriculture technologies to optimise farming outputs and transform agricultural production.

The President of the African Development Bank Group, Akinwumi Adesina.

"Technologies to achieve Africa's green revolution exist, but are mostly just sitting on the shelves. The challenge is a lack of supportive policies to ensure that they are scaled up to reach millions of farmers," said Adesina during a keynote speech delivered at the 2018 Agricultural and Applied Economics Association (AAEA) Annual Meeting held in Washington, D.C on August 2018.

Adesina said technology transfer was needed immediately and that evidence from countries like Nigeria demonstrated that technology plus strong government backing was already yielding positive results. "All it took was sheer political will, support by science, technology and pragmatic policies...Just like in the case of rice, the same can be said of a myriad of technologies, including high-yielding water efficient maize, high-yielding cassava varieties, animal and fisheries technologies."

The African Development Bank is pointing the way to how this can be done, and is currently working with the World Bank, the Alliance for a Green Revolution in Africa (AGRA), and the Bill and Melinda Gates Foundation to mobilise \$1bn to scale agricultural technologies across Africa under a new initiative called Technologies for African Agricultural Transformation (TAAT).

TAAT is taking bold steps to bring down some of the barriers preventing farmers from accessing latest seed varieties and technologies to improve their productivity.

"With the rapid pace of growth of the use of drones, automated tractors, artificial intelligence, robotics and block chains, agriculture as we know it today will change," added Adesina. "It is more likely that the future farmers will be sitting in their homes with computer applications using drone to determine the size of their farms, monitor and guide the applications of farm inputs, and with driverless combine harvesters bringing in the harvest."

## **Producing technology-driven farmers**

Adesina used the opportunity to advocate for African universities to adapt their curriculum to enable technology-driven farmers and to focus on agribusiness entrepreneurship for young people, emphasizing the need to rise beyond theories to application.

Through its innovative Enable Youth initiative, the African Development Bank has in the past two years committed close to \$300mn to develop the next generation of agribusiness and commercial farmers for Africa. Adesina furthermore stressed Bank's resolve to change the face of agriculture in Africa to unleash new sources of wealth.

AAEA President Scott Swinton said Adesina and the African Development Bank exemplify the use of economics that make a difference in people's lives. "If applied economics is economics that make a difference, I think that there is no better example of someone who has used that than Akinwumi Adesina."

Adesina told delegates at the 2018 conference attended by over 1,600 agricultural and applied economists from around the world: "There is no reason why Africa should be spending US\$ 35 billion a year importing food. All it needs to do is to harness the available technologies with the right policies and rapidly raise agricultural productivity and incomes for farmer and assure lower food prices for consumers."

## **SCPZs: creating new economic zones**

Adesina is advocating for the creation of staple crops processing zones across Africa (SCPZs): vast areas within rural areas set aside and managed for agribusiness and food manufacturing industries and other agro-allied industries, enabled with right policies and infrastructure. "I am convinced that just like industrial parks helped China, so will the SCPZs help to create new economic zones in rural areas that will help lift hundreds of millions out of poverty through the transformation of agriculture- the main source of their livelihoods- from a way of life into a viable profitable business that will unleash new sources of wealth."

The African Development Bank has already begun investing in the development of processing zones in a number of African countries, including Ethiopia, Togo, Democratic Republic of Congo, and Mozambique, with a plan to reach 15 countries in a few years.

To help Africa transform its agriculture, the Bank is investing \$24 bn over the next ten years to implement its Feed Africa Strategy.
