

Gilat Satcom partners with DiViNetworks to boost network operators in Africa

Gilat Satcom, a leading provider of satellite and fibre-based connectivity services in Africa, Asia and the Middle East, today announced that it has partnered with DiViNetworks to boost satellite and fibre capacity and reduce costs for ISPs and network operators.

Dan Zajicek

With the new DiVinci line of solutions, network operators, Internet Service Providers (ISPs) and large corporations can enjoy 20%-50% extra capacity over their existing infrastructure for only 50% of the price they currently pay.

"As part of our strategy to launch advanced technologies to the African market we launched the DiVinci solution", said Dan Zajicek, CEO at Gilat Satcom. "We strive to offer operators and ISPs more efficient services while improving their subscribers' experience".

Gilat Satcom's DiVinci services are available to all cellular operators, ISPs and large corporations such as oil & gas, across Africa who want to expand their existing capacity while reducing the cost per Mbps dramatically. Operators, ISPs and large corporations who buy their capacity from other providers can also use Gilat Satcom's DiVinci DCM in their networks to compress incoming data traffic and reduce the amount of capacity required.
