

Dreamnails launches inTouch nail enamel

Dreamnails has launched inTouch nail enamel, which has been developed and is manufactured in South Africa taking into account SA lifestyle and climate conditions.

In a range of 32 colours, inTouch is specially developed to last for longer periods after applied to the nail. A base and top coat that should be used with the colour nail enamel to further ensure longer lasting application on the nail has also been developed.

The inTouch range includes a 5ml and a 10ml bottle in each of the 32 colours. The range retails between R32 for the 5ml and R54 for the 10ml bottle. Nails can either be done in one of the 36 Dreamnails salons or at home from mid-November 2011.
