

Protect exterior of home with Wallguard

Developed using an advanced formulation that is micro-porous and allows trapped water to escape, Wallguard from Dulux works to effectively prevent blemishes to your paintwork as a result of moisture. Ideally suited for coastal regions and areas with heavy rainfall, Wallguard features an added hydrophobic mechanism, making wet conditions like water off a duck's back.

With its smooth coating and low sheen finish, it sheds dirt easily and offers a tough and durable coating ensuring weather patterns never get the better of you.

"The added hydrophobic mechanism offers a dual effect which eliminates bubbling and blistering. Not only does it release trapped moisture from inside walls, but it repels water at the surface too. This prevents seepage into walls, and when used in combination with Dulux's Mouldex, surfaces are protected from dirt which is retained by mould," explains Dulux master brand manager, San-Marie Jacobsz.
