

# Musina residents demand reliable water supply

By [Bernard Chiguvare](#)

25 Nov 2021

For the past two weeks, Makie Nevhulaudzi, has woken up at 4am daily to make a round trip with a 100 litre container in a wheelbarrow to a relative's home where she fills the container with water.

The round trip to her relative's house in Matwale Extension 9 is about a four kilometre walk. Nevhulaudzi, like many other residents of Extension 14, has to do this because of the inconsistent water supply to their RDP homes.

While the water was restored last Friday, residents are sceptical and say it is a matter of time before their taps run dry yet again. Residents now want the municipality to drill boreholes and install large tanks as an alternative for when taps run dry.

## Residents protest against inconsistent water supply

In 2019, [GroundUp reported](#) on complaints by residents that some of the RDP houses in Phase 2 of Extension 14, a few kilometres east of Musina, had never been connected to the electricity or water supplies.

At the time, the Musina Local Municipality told *GroundUp* that the delay to connect the homes was due to funds from the Department of Energy which were due to be transferred by June 2020.

Last month, Matwale residents joined other communities who [protested](#) outside the Musina Municipality over months of daily water outages and a lack of water tankers. Protesters also objected to the municipality cutting off electricity when people default on water bills.

When we visited Matwale again last week, Nevhuludzi and other residents were seen collecting rainwater in buckets lined outside homes in order to at least flush their toilets.

“I have to do my laundry today as I managed to collect a reasonable amount of water. We can also use the toilet now. We spent most of the day outside because of the stench from our bathrooms,” said resident Naomi Mafungo.

Collaboration key to saving water

## ”No water tanks from the municipality”

Mafungo and about 20 others she lives with often buy water from people in the neighbouring Harper township who have boreholes. They make about seven trips per day and either transport the water using wheelbarrows or carry the containers on their heads.

Julia Mashava, who joined the protest outside the municipality last month said: “Among the demands was for constant water supply but we have not seen any change. There are no water tanks from the municipality.”

In October, the Vhembe District Municipality said that 19 of the 36 boreholes in Musina were out of action. We sent questions to the municipality last week over complaints raised by residents but did not get a response by the time of publication. Calls to spokesperson Matodzi Ralushai also went unanswered.
