

Exponential Technologies

TechBytes Season 2 is a mini-series consisting of 17 bite-sized episodes, covering Matt Brown's adventures in the UK and at London Tech Week (9-16 June 2019). TechBytes unlocks powerful insights within the technology and business space.

Exponential technologies have become increasingly more accessible over time and now that anyone can access these technological capabilities, there is a never-ending map of possibilities for those who venture into this space.

With technology capabilities such as additive manufacturing, virtual and augmented reality, artificial intelligence, advanced robotics and biotechnology just to name a few, there is a massive variety of exponential technologies that will shape our everyday lives and the business world as we know it.

Never before has such knowledge been widely available to the public and it's an exciting time to be an innovator and entrepreneur as this advancement will surely serve as a milestone to remember when humanity reflects on its growth and development.

Brown discusses the advancement of exponential technologies and how its growth in accessibility is so monumental in enabling businesses and people to do more with what they have, at scale.
