

iWayAfrica launches fibre services in Zambia

iWayAfrica Zambia has announced the launch of its fibre to the premises offer to business and consumers. This is the latest connectivity service to be launched by iWayAfrica Zambia, which is also part of Gondwana International Networks, a pan-African communications service company.

“Ongoing developments in the telecoms sector has aided in lowering prices and broadening access to infrastructure. iWayAfrica Zambia identified an opportunity to extend its offering with the launch of fibre connectivity,” says Ulrich Lassen, head of business, iWayAfrica Zambia.

He says that the new fibre service has already been successfully deployed to major corporates seeking to establish dual-links for redundancy purposes.

The new service complements iWayAfrica’s rich legacy as a leading Internet service provider in Zambia. With an already strong market share in VSAT satellite services, iWayAfrica Zambia now provides connectivity to remote farmers, lodges and other areas with limited infrastructure, as well as in urban areas where VSAT has proven to be a consistently reliable communications tool.

“The launch of this new fibre service offers customers a full turnkey solution for their communication needs. This extends from dedicated Internet, IP transit, MPLS, VSAT backhaul and redundancy, to numerous value added services such as

mail hosting, archiving and data back-up,” concludes Lassen.
